

Texas Landowner Survey on Solar Energy and Farm and Ranchland

Attention Producers: Seeking Perspectives of Solar on Farmland

We're conducting an important survey to gather insights and attitudes toward solar on farmland in Texas. We welcome feedback from farmers, ranchers, farmland owners, and others involved in farm operations to help effectively build consensus around Smart SolarSM in Texas. American Farmland Trust (AFT) believes the interests, needs, and concerns of farmers and farmland owners need to be heard and shared with decision-makers.

The survey, offered in both English and Spanish, takes only **10-15 minutes** to complete and your responses will be confidential. Your input will directly influence AFT's Smart Solar strategy and our collaboration with stakeholders to facilitate smart and thoughtful build-out of solar capacity in Texas while benefiting farmers and minimizing displacement of agriculture on Texas's best farmland.
